

TAEHO NA

Artificial Intelligence Engineering Student

Email: eth42898@gmail.com | GitHub: github.com/eth42898-eng

An AI Engineering student who learns by taking systems apart and rebuilding them, with a strong interest in autonomous driving where perception, decision-making, and real-world safety meet.

Education

Chosun University — Department of Artificial Intelligence Engineering

2nd year

Coursework: Signals and Systems, Machine Learning, Data Structure, Open Source SW Introduction, Artificial Intelligence Introduction

Skills

Programming

C / C++ **Basic**

Python **Basic**

Tools

Git **Basic**

GitHub **Basic**

Docker **Basic**

Projects

Lane Detection System

Detect lane lines from a front-facing camera and estimate the vehicle's position within the lane. Python, OpenCV, NumPy

Traffic Sign Recognition

A CNN-based classifier that recognizes traffic signs for driving decisions. Python, PyTorch, OpenCV

Mini Self-Driving RC Car

Combine lane detection and sign recognition to drive autonomously on a test track. Python, Raspberry Pi, OpenCV

Experience

CAC Programming Club — Member

Career Goal

- AI Developer
- Computer Vision Engineer
- Autonomous Driving Engineer
